# Uploading Data with Chordomics

Once your data is properly formatted you can upload it to Chordomics to explore it.

Select the "File Upload" tab.

Then select the "Browse" button.

A window will appear where you can select multiple files. Ensure they are csv format with headings of taxonomy (Superkingdom, Kingdom, Phylum, Class, Order, Family, Genus and/or Species) and function (COG_Category and/or COG_Name).

First using the software's data processing pipeline is the best way to ensure your data is correctly formatted.

A blue banner will indicate your files have been successfully uploaded. Then go to the "Chord Plot" tab to explore your data!
